

Algorithm For 1 Million File Processing:

→ Start.

1. Reading all lines from text file.
2. Removing duplicate data.
3. Creating separate text file ~~with~~ for performing different thread.
4. Starting all the thread with different created text file.
5. In one thread,
 - i) Reading all the lines from text file.
 - ii) Checking validity with mobile number and gmail.
 - iii) If valid then insert it to database, otherwise go to the next line.
6. Stop
